DETAILED ACTION

Specification

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the predetermined timetable or timetable, recited in claims 8, 12, 14 and 16, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to because labeling is required for Fig.1b. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

4. Claim 16 is objected to because of the following informalities: Claim 16 recites the limitation "the first reception branch" and "the second reception branch" in lines 6-7. The office suggests replacing it with "a first reception branch" and "a second reception branch", respectively. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 5 and 9-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5, line 3, recitation of “the reception branch” is unclear and indefinite as there are first reception branch and second reception branch, it is unclear as to which reception branch it is referring to.

In claim 9, line 1, recites “a transmitter apparatus transmitting at the operating frequency”. Initially, a transmitter apparatus is recited in claim 8, lines 8-9. It is unclear whether this is the same or different transmitter apparatus as recited in claim 9, wherein claims 10 and 11 directly depend on claim 9.

Allowable Subject Matter

6. Claims 1-4, 6-8 and 12-15 are allowed.
7. Claims 5 and 9-11 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.
8. Claim 16 would be allowable if rewritten or amended to overcome the claim objection set forth in this Office action.

9. The following is a statement of reasons for the indication of allowable subject matter:

Present application discloses a receiver comprising a diversity receiver with plurality of correlators and a rake receiver. The first receiver receives signal in a first operating frequency passing through the correlators, while the second receiver receives signals in a second frequency, which is different from the first operating frequency. The two receivers simultaneously measures signals received. And further, the receiver disclosed comprises a measuring block in the rake receiver measuring impulse response of the received signal. The transmitter transmitting the signal comprises a predetermined time table of when the receiver tunes to a second frequency. Closest prior art, Zehavi, teaches a CDMA system comprising a diversity receiver with plurality of correlators and a rake receiver. The receiver uses locally generated PN codes to correlate the received signal. Zehavi further teaches where the receiver tunes to a different frequency other than the first frequency. However, Zehavi does not teach the received signal combined on baseband frequency, and further does not teach a predetermined time table, as explained above.

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tiedemann, Jr. et al teach CDMA receiver comprising plurality of correlators and rake receiver.

Miya teaches a CDMA receiver comprising correlators and a rake receiver with searching circuit.

Rich teaches a dual mode receiver measuring different characteristics of received signal.
